1. Penjelasan Pelaksanaan Proyek Pribadi

1.1 Ringkasan Proyek

Judul Proyek: W.I.S.E (Wireless IoT Surgical Environment) Monitoring System

Penjelasan Singkat: Proyek ini bertujuan untuk mengawasi ruangan operasi secara real-time selama operasi berjalan. Sistem ini juga ada sistem verifikasi dan log pengguna ruangan melalui biometrics.

Sensor yang akan digunakan:

- Fingerprint Sensor FPM10A
- ESP8266
- DHT11
- M2Q Flying Fish gas sensor

Actuator yang akan digunakan:

- Buzzer
- Micro Servo SG90
- Push Button

Dashboard Pallete untuk NodeMCU:

- Dashboard: Pallete ini digunakan untuk membuat user interface pada simulasi node-red
- Random: Pallete ini digunakan untuk simulasi angka dan string random pada node-red
- Table: Pallete ini digunakan untuk membuat table untuk menunjukkan database sql
- Pynodered function: Library ini digunakan untuk membuat function custom lewat python

IoT Commnunication yang akan digunakan:

- MQTT
- WiFi

Cara Kerja:

Untuk dapat menggunakan ruangan operasi, User harus scan fingerprint dulu. Jika fingerprint matched dengan yang ada di database, Servo akan bergerak untuk unlock pintu ruang operasi. Data ID Pengguna, Posisinya dan Waktu User masuk akan disimpan di database. Riwayat ini dapat dilihat di UI.

Saat User terverifikasi, Sistem akan Mulai bekerja. Setiap detik, sensor DHT11 akan mengirim data humiditas ruangan dan temperatur ruangan ke MQTT Server dan Sensor gsa akan mengirim kualitas udara ke MQTT server juga. PC yang berada diluar ruangan akan melakukan proses Machine Learning untuk memberikan hasil jika ruangan tetap aman untuk dipakai. Jika tidak, Buzzer akan menyalah (bukan

di dalam ruangan operasi tetapi di Monitoring room) untuk memberi tahu bahwa hal ini harus dibenarkan secepatnya tanpa mengganggu apapun yang sedang dilakukan dalam ruangan operasi.

1.1.1 Info Proyek

Nama Proyek	WISE (Wireless IoT Surgical Environment) Monitoring System
Target Penyelesaian	5 Mei 2024
Target Peran dalam Proyek	<ol style="list-style-type: none">Memastikan ruangan operasi selalu dalam keadaan optimalAda Riwayat dan verifikasi siapa saja yang menggunakan ruangan operasi, jam berapa dan posisinya apa.Memastikan tim monitoring mengetahui jika ada masalah dalam dengan ruang operasi.

Table 1: Info Proyek

1.1.2 Linimasa Provek

Tanggal	Penjelasan
10 April 2024	Pembuatan Konsep Proyek
15 – 20 April 2024	Pembuatan Simulasi Proyek dengan Node-red
22 – 24 April 2024	Pembuatan EasyEDA
20 – 24 April 2024	Pembuatan FlowChart, Mindmap dan blok diagram
27 April – 3 Mei 2024	Pembuatan Rangkaian
27 April – 3 Mei 2024	Pembuatan Algoritma Sistem
2 Mei 2024	Pengujian Sistem
20 April – 4 Mei 2024	Pembuatan Laporan
5 Mei 2024	Finalisasi Proyek
8 Mei 2024	Pameran

Table 2: Linimasa Proyek

1.2 Mindmap

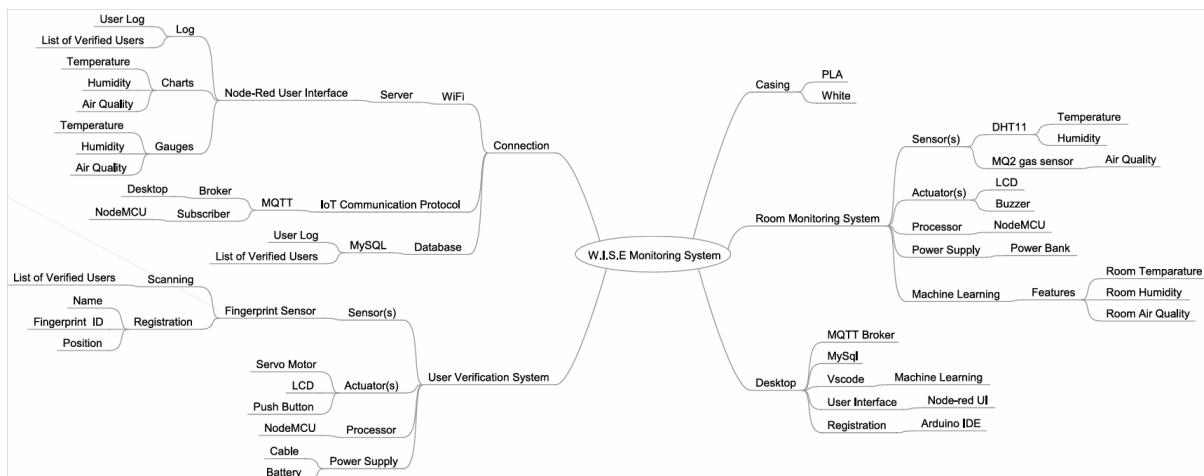

Figure 1: Mindmap

Penjelasan: Ini adalah mindmap dari WISE Monitoring System. Connection yang akan digunakan adalah MQTT, Node-red UI, MySQL Database. Casing akan dibuat dengan PLA dan akan berwarna putih. Sistem ini memiliki dua bagian besar yaitu Room Monitoring system dan User verification system.

1.3 Flow Chart

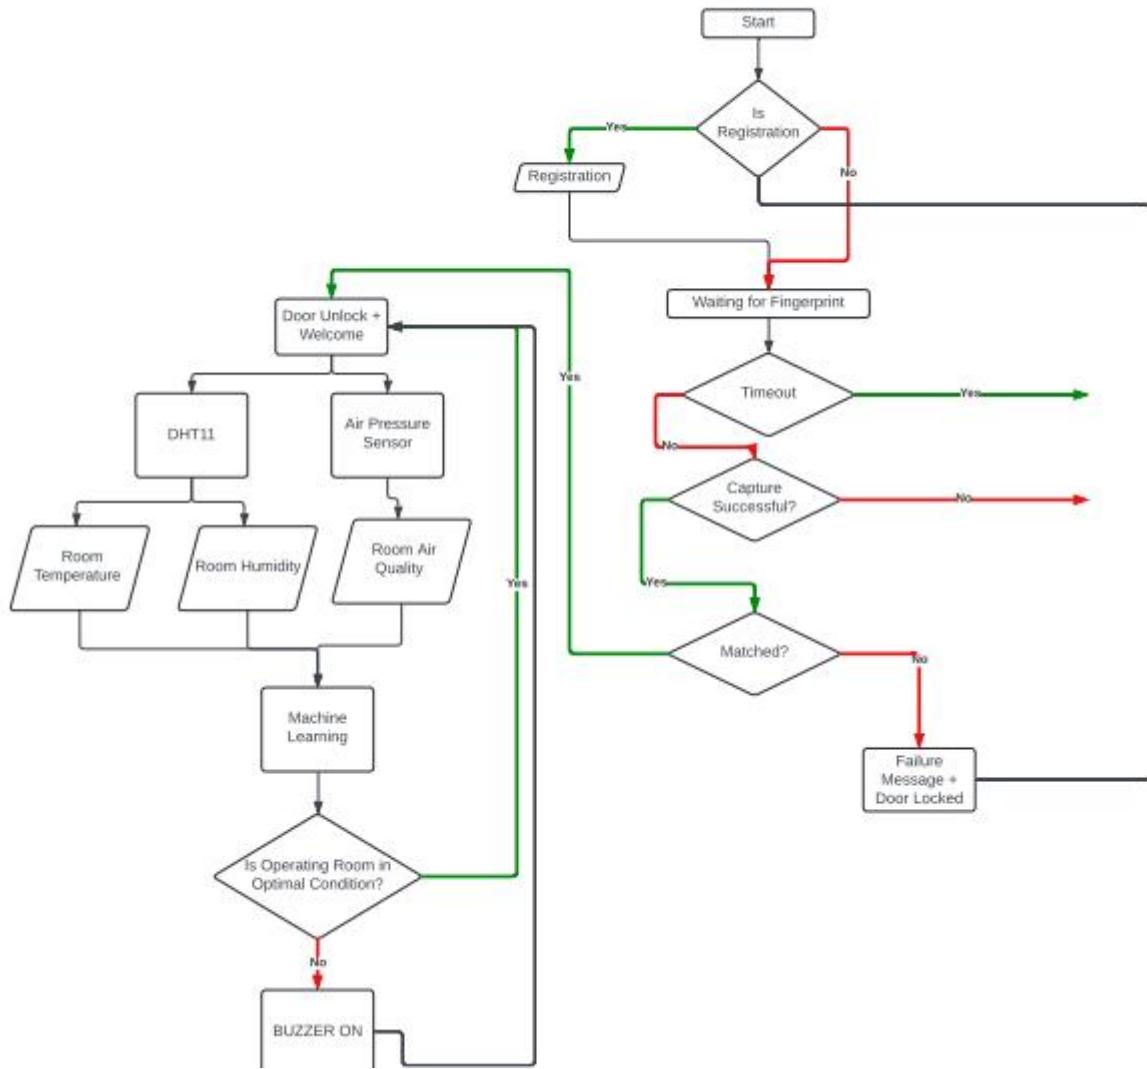

Figure 2: Flow chart

Penjelasan:

Sistem ini dimulai dengan bagian user verification. Jika dalam mode registration, fingerprint sensor akan registrasi fingerprint baru untuk database. Jika tidak dalam mode registration, fingerprint sensor akan menunggu jika ada fingerprint. Jika tidak, akan timeout. Jika iya akan melihat jika capture successful dan jika matching dengan fingerprint yang ada di database. Jika tidak, pintu akan tidak terbuka dan ulang ke start lagi. Jika iya, akan lanjut ke bagian room monitoring system. Sensor DHT11 dan M2Q akan terus mengukur suhu, humiditas dan kualitas udara ruangan operasi dan akan mengirim datanya ke machine learning. Model machine learning akan memastikan ruangan dalam kondisi yang optimal. Jika iya, akan kembali ke atas dan terus dicek setiap detik ruangannya. Jika tidak, buzzer akan menyala untuk memberikan peringatan bagi tim monitoring untuk memperbaiki masalah secepatnya.

1.4 Komponen Proyek

1.4.1 Diagram Komponen

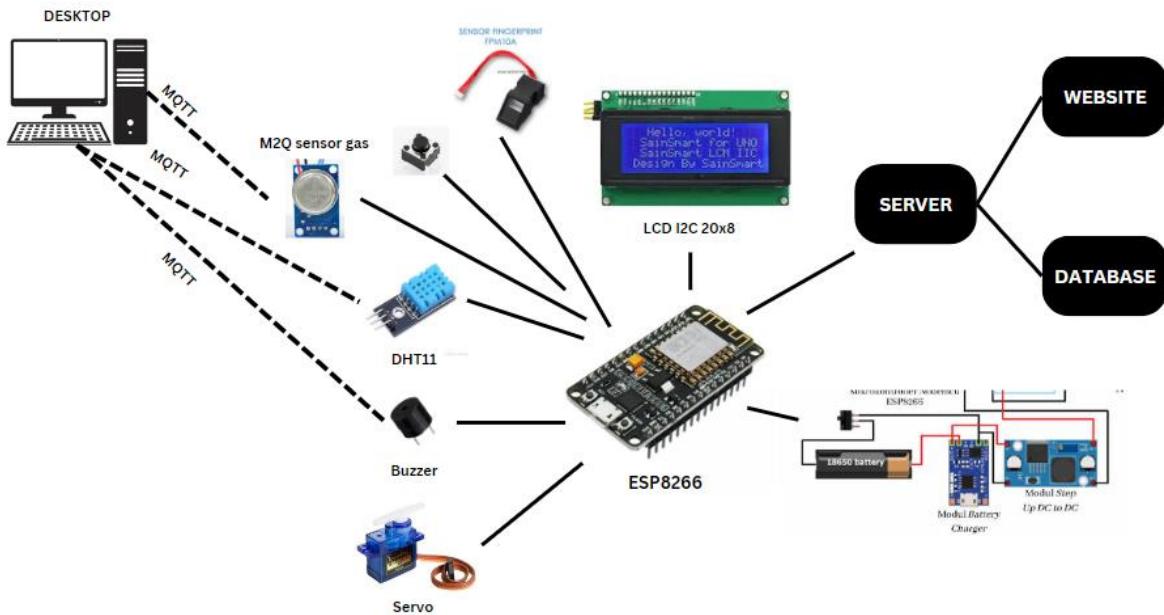

Figure 3: Diagram Komponen / Blok Diagram

Penjelasan:

NodeMCU akan terhubung dengan LCD dan fingerprint sensor yang akan mengirim data ke Server dan akan masuk ke database dan dapat dilihat lewat website. Servo juga terhubung dan akan bergerak Berdasarkan fingerprint. NodeMCU juga terhubung dengan DHT11 dan M2Q yang akan mengirim data dengan MQTT ke Desktop setiap detik. Desktop akan mengirim MQTT balik untuk mengalah buzzer atau tidak.

2. NODE-RED

2.1 Node-red overview

Sebuah simulasi akan dijalankan dengan Node-red. Angka temperatur, humiditas dan kualitas udara akan dipilih secara random. Fingerprint binary code juga akan dipilih secara random.

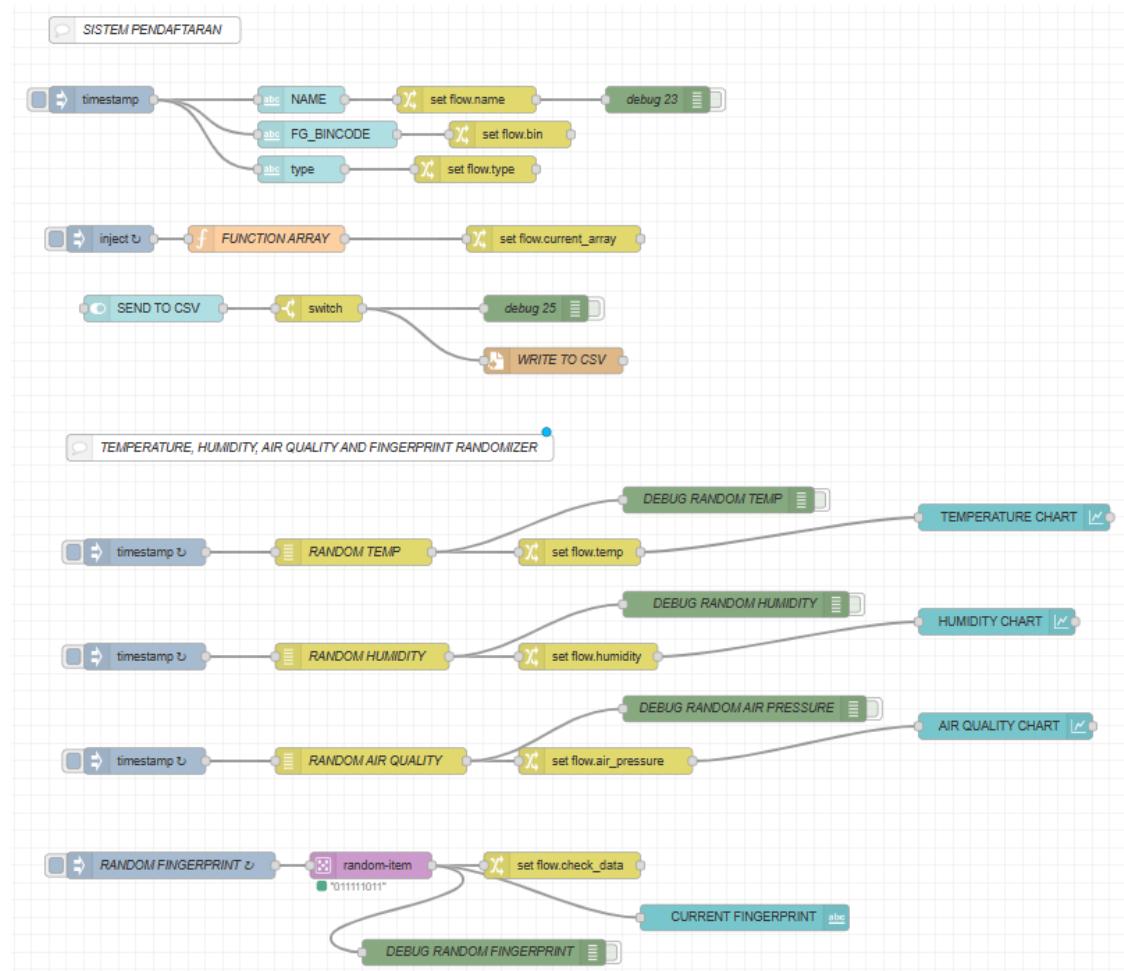

Figure 4: Full Node-red (1)

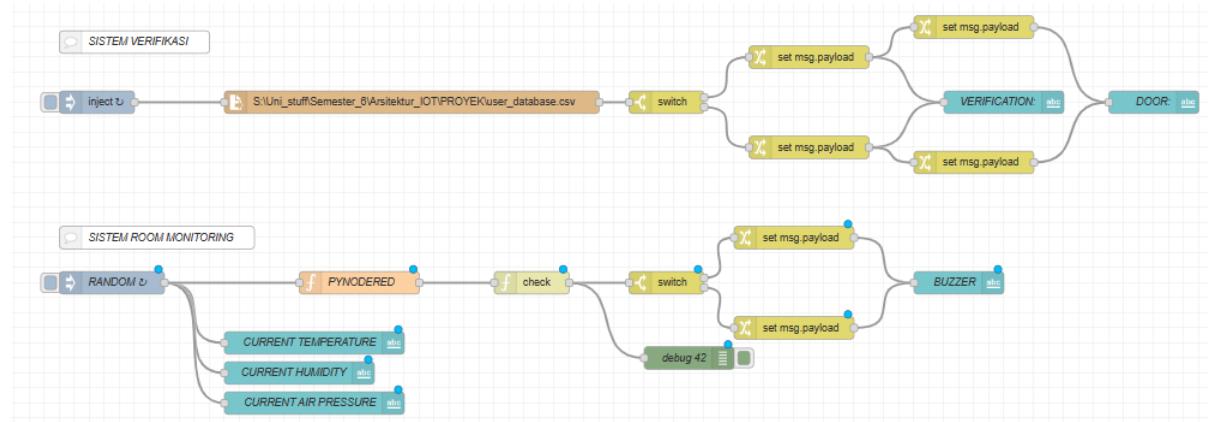

Figure 5: Full Node-red (2)

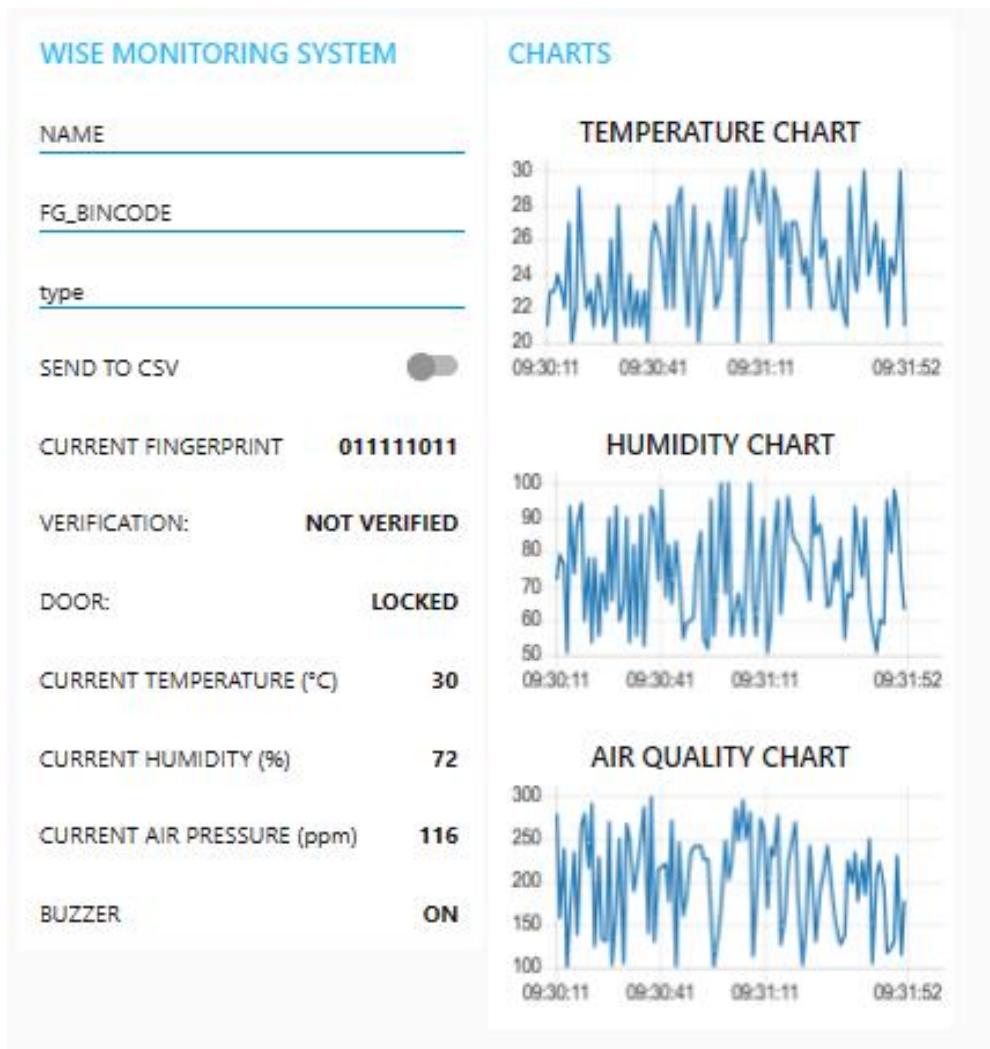

Figure 6: Node-red dashboard

2.2 Penjelasan Node-red

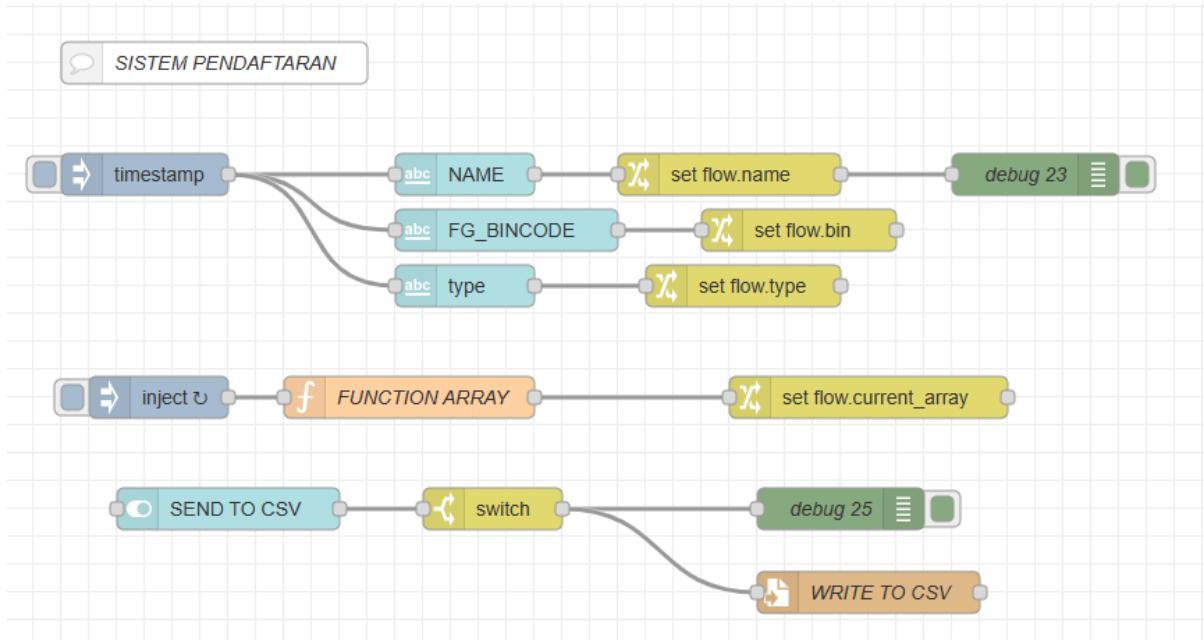

Figure 7: Simulasi sistem pendaftaran

Penjelasan: Akan ada insert nama, fingerprint binary code dan tipe di UI node-red. Semua ini akan disimpan di context dan diubah menjadi array oleh node function dan akan disimpan lagi di context yang mengabungkan semuanya ke dalam array. jika sebuah button dipencet, data ini akan disimpan di sebuah csv file.

25
```

Figure 12: Machine Learning code

Penjelasan Machine Learning: Machine Learning menggunakan Logistic regression dengan data.csv untuk menentukan jika kondisi ruangan operasi masih optimal.

BAGIAN VERIFICATION

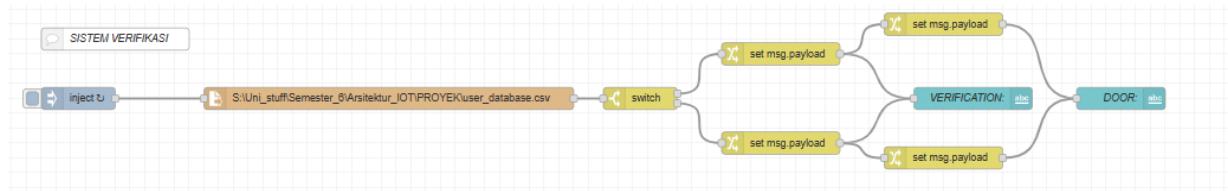

Figure 13: Node-red verifikasi

Akan dicek dengan database jika random fingerprint matching. Jika matching, door/servo akan terbuka dan user akan diverifikasi. Jika tidak door/servo akan tutup dan user tidak verified.

BAGIAN MONITORING

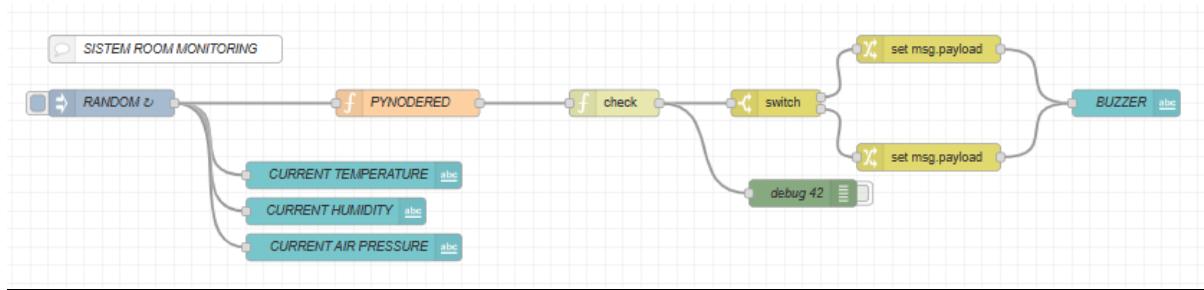

Figure 14: Node-red Monitoring

Di bagian room monitoring, akan digabungkan temperature, humidity dan air quality dalam satu array dengan menggunakan function terus akan dicek oleh fungsi pynodered dan dari itu akan diputuskan jika buzzer ON atau OFF.

3.2 Penjelasan PCB(s)

1. LCD I2C

LCD I2C	NodeMCU
GND	GND
VCC	3V3
SDA	D2
SCL	D1

Table 4: Koneksi LCD

Penjelasan: LCD akan terkoneksi dengan NodeMCU dengan menggunakan koneksi I2C. selain GND dan VCC pin, pin SDA dan SCL akan terhubung ke pin D2 dan D1 di NodeMCU yaitu pin SDA dan SCL pada NodeMCU.

2. Buzzer Module

Buzzer	NodeMCU
GND	GND
VCC	Vin
DATA	D3

Table 5: Koneksi Buzzer

Penjelasan: Buzzer Module akan terkoneksi ke NodeMCU dengan pin GND dan VCC. Signal mati atau nyala akan diterima melalui pin D3.

3. DHT11

DHT11	NodeMCU
GND	GND
VDD	Vin
DATA	D6

Table 6: Koneksi DHT11

Penjelasan: Sensor DHT11 akan terkoneksi ke NodeMCU dengan pin GND dan VDD. Sensor ini akan menerima signal melalui pin DATA yang terkoneksi ke pin D6.

4. FPM10 Fingerprint Sensor Module

FPM10	NodeMCU
GND (black)	GND
5V (red)	
RX (green)	D5
TX (yellow)	D6
LOW (blue)	-
3V3 (white)	3V3

Table 7: Koneksi R307

Penjelasan: FPM10 memiliki mode 3v3 dan 5v. Mode yang akan digunakan adalah 3v3. Rx dan Tx pins dikoneksikan kepada pin D5 dan D6 di NodeMCU.

5. Motor Servo SG90

SG90	NodeMCU
GND	GND
VCC	Vin
SIGNAL	D5

Table 8: Koneksi SG90

Penjelasan: Servo Motor SG90 akan terkoneksi ke NodeMCU dengan pin GND dan VCC. Signal untuk bergerak akan diterima melalui pin D5.

6. Gas Sensor M2Q Flying Fish

Sensor Tekanan Udara	NodeMCU
VCC	3V3
GND	GND
Digital	-
Analog	A0

Table 9: Koneksi Sensor Gas Sensor

Penjelasan: Module ini merupakan sensor gas yang dapat mendeteksi kualitas udara dan akan lebih tinggi jika mendeteksi gas seperti karbon monoxide atau smoke. Module ini memiliki dua mode input yaitu digital dan analog input. Yang digunakan untuk proyek ini hanya analog input saja yang terhubung dengan analog pin 0 di esp8266.

4. TESTING

4.1 Testing Room Monitoring System

4.1.1 Langkah Pengujian

1. Rangkain:

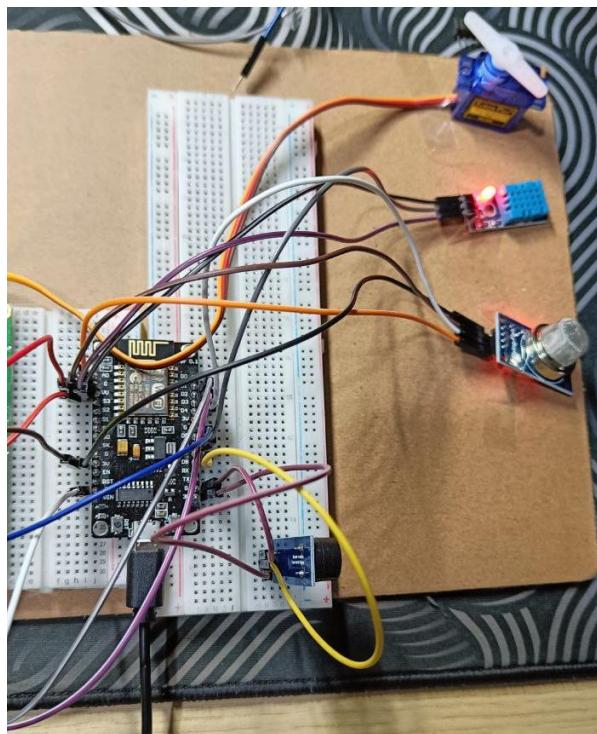

Figure 26: Rangkaian Testing Monitoring System

2. MQTT Broker akan digunakan untuk menerima dan mengirim pesan
3. Sistem ini akan menerima angka ppm kualitas udara dengan topic -gasValue, angka humiditas dengan topic -humValue dan angka temperature dengan topik -t tempValue.
4. Semua ini dapat dilihat di dashboard node-red. Log pembacaan juga dapat dilihat di User interface node-red. Selain itu node-red akan menggunakan kode Machine Learning untuk mengetahui jika buzzer harusnya nyala atau mati. Ia akan mengirim message ini dengan MQTT dengan topik -buzzer. NodeMCU akan menerimanya dan menyalahkan atau mematikan buzzer sesuai dengan message MQTT yang diterima.
5. Untuk mendapatkan reading yang berbeda-beda saya mencoba untuk membuat kondisi dimana sensornya akan memberikan nilai yang lebih tinggi.

4.1.2 Hasil Pengujian

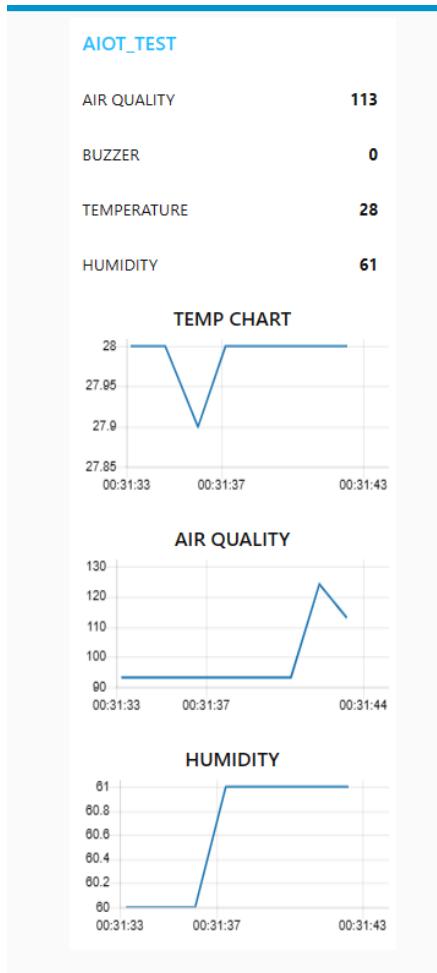

Figure 27: UI Node-red

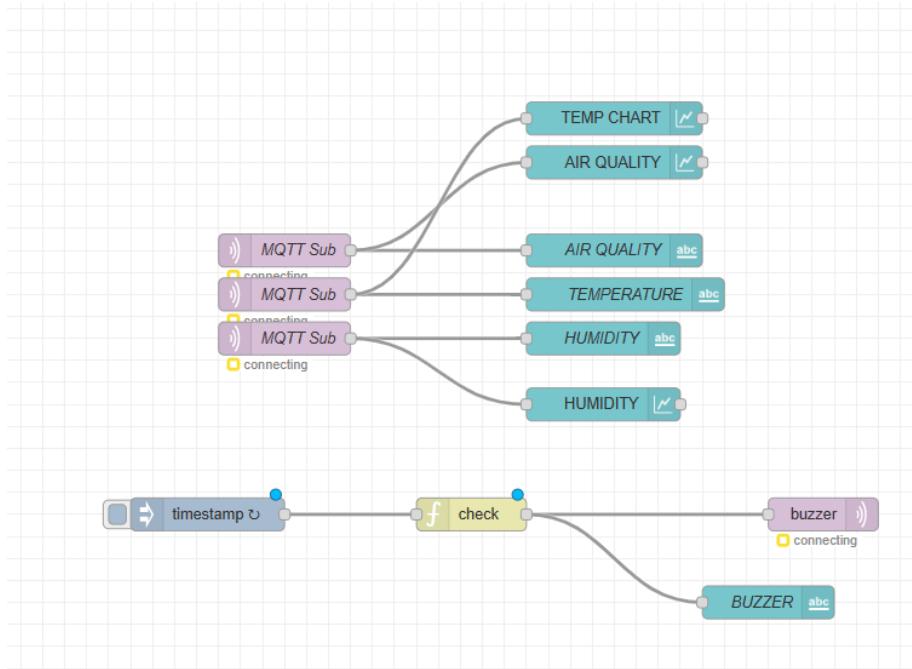

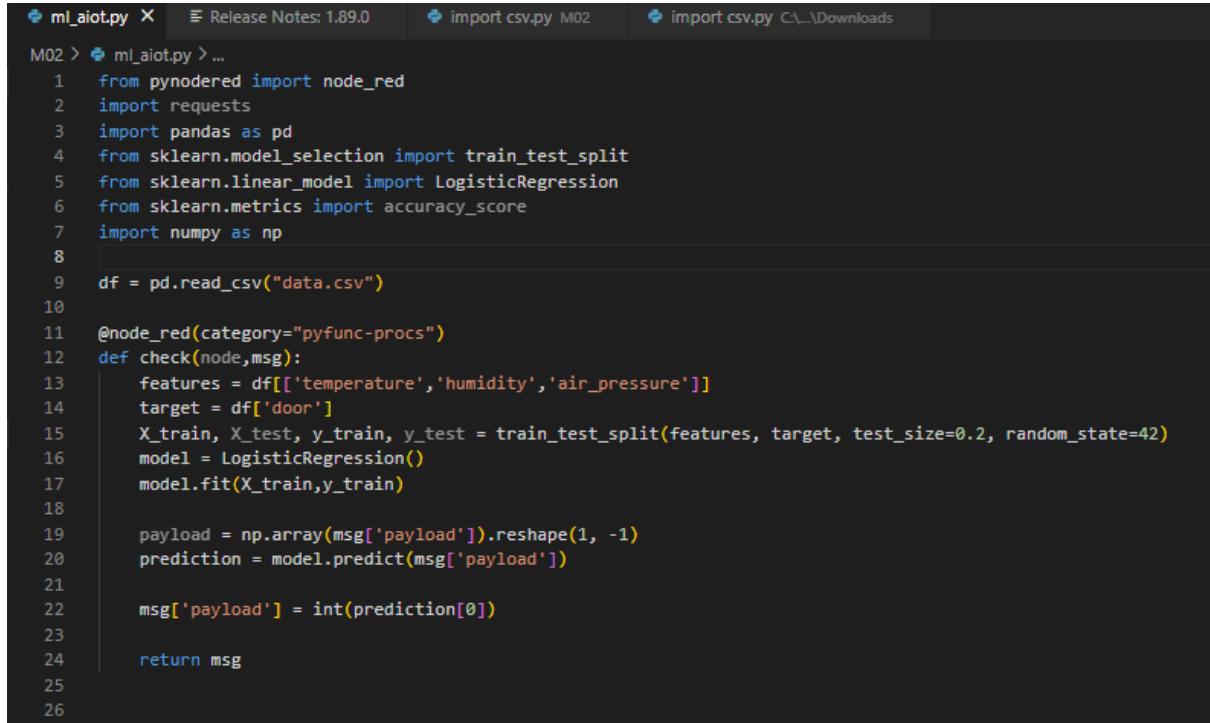

Figure 28: Node-red monitoring test

Buzzer akan selalu mati karena semua sensor tidak akan memberikan angka diatas batas yang akan membuat buzzer nyalah. Oleh karena itu, saya membuat pesan MQTT buzzer random untuk pengujian ini.

Figure 30: Machine Learning Accuracy

4.1.3 Analisis Pengujian

Reading No.	gasValue	tempValue	humValue	Buzzer (random)
1	90	26	60	0
2	120	26	60.2	0
3	121	26.5	60.2	1
4	120	26	61	1
5	115	27	65	0
6	110	27.5	64	1
7	110	28	62	1
8	112	27	61	0
9	150	26	60	1
10	145	26	60	0

Table 10: Table Analisis Monitoring System test

Analisis:

Dari pengujian ini, bisa dilihat bahwa gasValue akan diantara 100 dan 150 dan ini lebih kecil dari pada ppm aslinya mungkin karena Voltage yang kurang. Akan tetapi hal ini bisa diadjust. Temp dan Hum value dapat terdeteksi dengan baik. Saat saya membuat udara di dekat sensor lebih panas dan lembab, angka yang dikirm juga berubah. Walaupun buzzer masih dalam keadaan random, message dapat diterima dengan baik.

4.2 Testing User Verification System

4.2.1 Langkah Pengujian

1. Rangkaian:

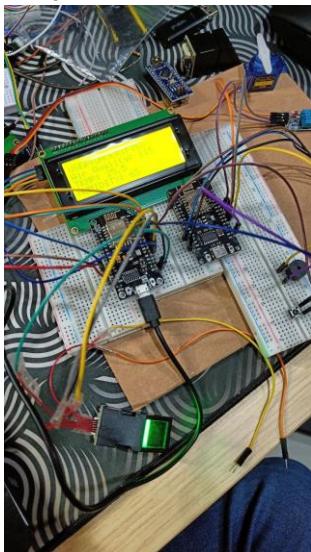

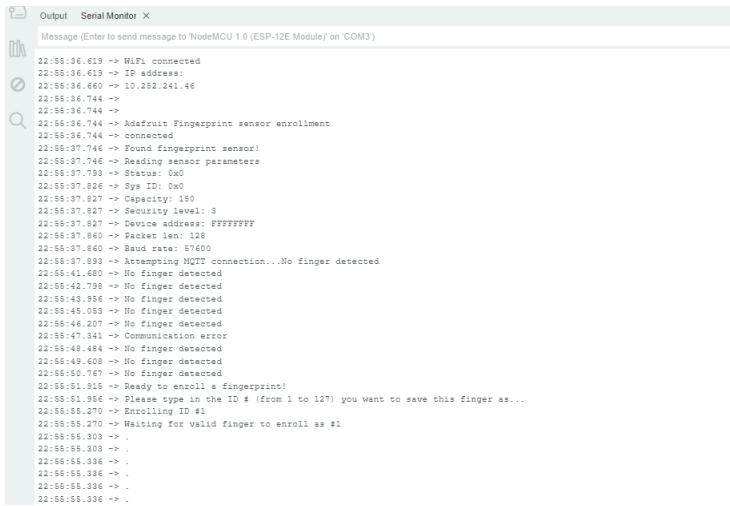

Figure 31: Rangkaian uji verifikasi

2. Push button, servo motor dan lcd akan terkoneksi ke NodeMCU. Push button akan digunakan untuk mengatifkan registrasi fingerprint. Servo motor akan bersifat sebagai door lock yang akan terbuka jika fingerprint matching dengan yang disimpan.
3. LCD akan menunjukan angka Temperatur, Humiditas, Kualitas Udara dan juga jika user sudah verified atau tidak.

4.2.2 Hasil Pengujian

```

Figure 32: Arduino Serial test

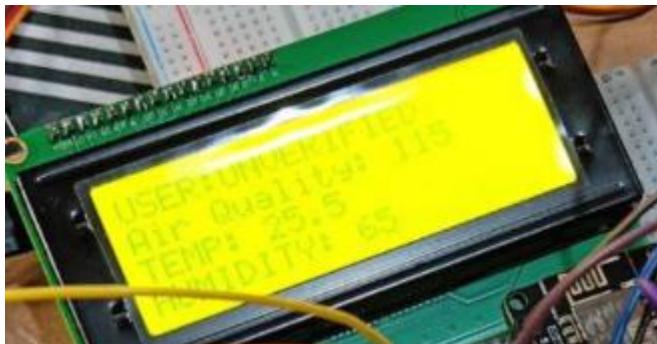

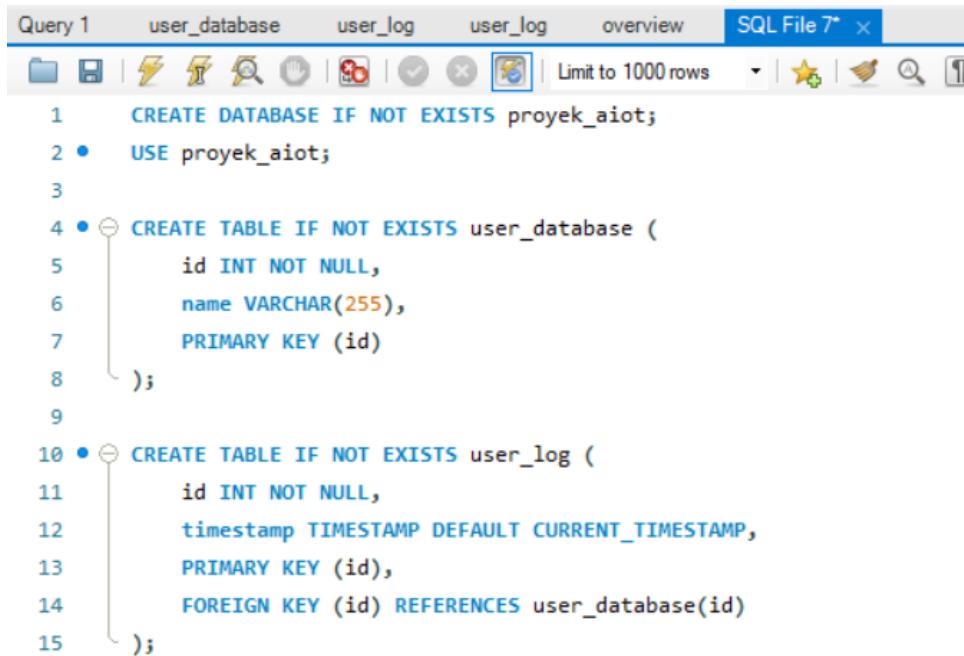

Figure 33: Layar LCD

4.2.3 Analisis Pengujian

Dari Pengujian ini, perlu diperhatikan fingerprint sensornya karena sering error dalam mendeteksi ada jari atau tidak. Sepertinya masalah hardware. Selain itu, Pengujian dapat berjalan dengan baik. Waktu sistem bekerja juga cepat. Servo terkadang error juga dengan tidak berhenti berputar. LCD dapat terupdate dengan baik jika MQTT terus menerima data dari sistem monitoring.

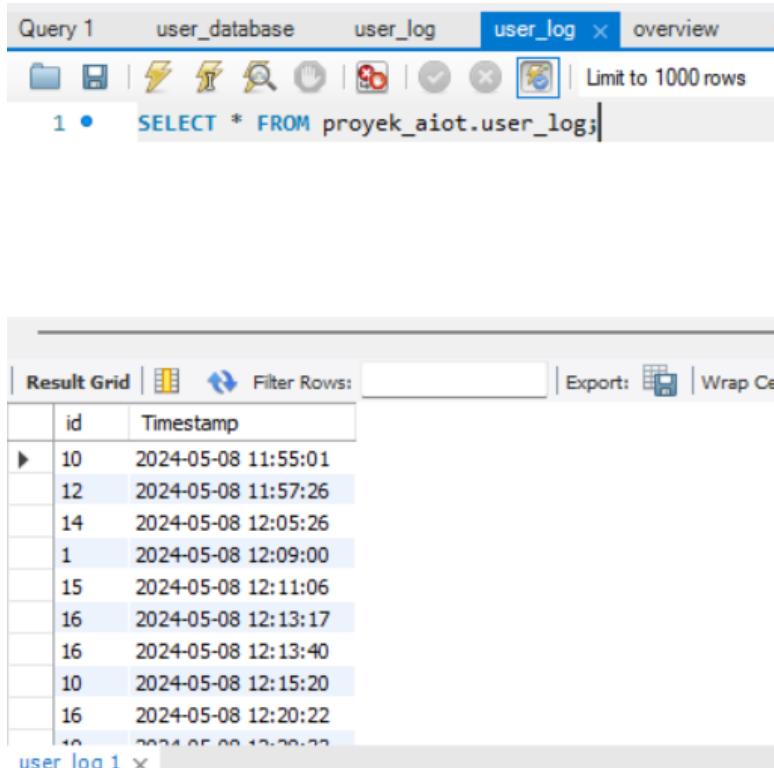

5. DATABASE

Aplikasi yang digunakan untuk dataset adalah MySQL yang diakses dengan menggunakan MySQL Workbench. Database yang dibuat adalah database User Log yang berisi tabel siapa saja yang masuk ruanganya, jam berapa dan Tanggal. Database user database juga dibuat yang berisi daftar nama, posisi dan fingerprint id semua user yang sudah terdaftar untuk diperizinkan masuk ruangan.

```
Query 1      user_database    user_log    user_log    overview    SQL File 7* ×
CREATE DATABASE IF NOT EXISTS proyek_aiot;
USE proyek_aiot;
CREATE TABLE IF NOT EXISTS user_database (
    id INT NOT NULL,
    name VARCHAR(255),
    PRIMARY KEY (id)
);
CREATE TABLE IF NOT EXISTS user_log (
    id INT NOT NULL,
    timestamp TIMESTAMP DEFAULT CURRENT_TIMESTAMP,
    PRIMARY KEY (id),
    FOREIGN KEY (id) REFERENCES user_database(id)
);
```

Figure 34: MySQL Code

```
Query 1      user_database    user_log    user_log    overview
SELECT * FROM proyek_aiot.user_log;
```

id	Timestamp
10	2024-05-08 11:55:01
12	2024-05-08 11:57:26

10	2024-05-08 12:20:22

Figure 35: Database user log

The screenshot shows a MySQL Workbench interface. The top bar has tabs for 'Query 1', 'user_database', 'user_log', 'user_log', 'overview', and 'user_database'. Below the tabs is a toolbar with icons for file operations, search, and other database functions. A status bar at the bottom says 'Limit to 1000 rows'.

The main area displays a query result grid. The title bar of the grid says 'Result Grid | Filter Rows: | Edit: | Export/Import: | Wrap'. The grid has columns 'id', 'Name', and 'Position'. The data is as follows:

	id	Name	Position
▶	1	Martin	Doctor
	2	Martin2	Cleanup
	3	Martin3	Cleanup
	5	Wesley	Doctor
	10	Shannon	Doctor
	11	Dilivio	Nurse
	12	Maleakhi	Cleaning Service
	14	Theo	Doctor
	15	Gayus	Tukang isi bensin
	16	Clara	Doctor

Figure 36: Database user database

6. USER INTERFACE

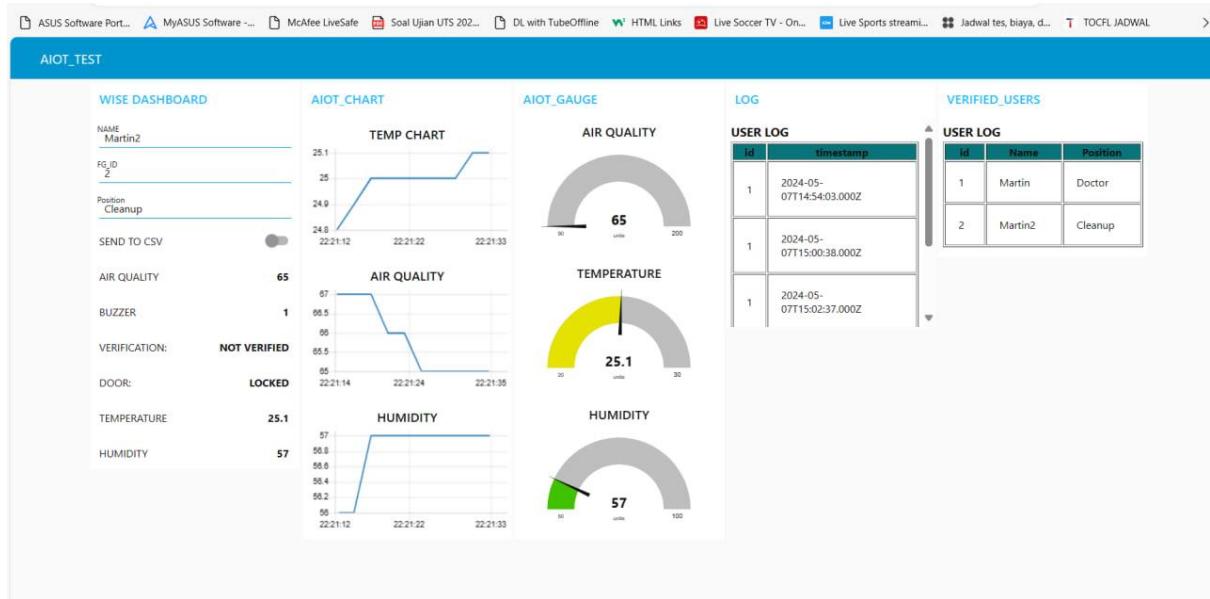

Figure 37: Final System Dashboard UI

Node-red:

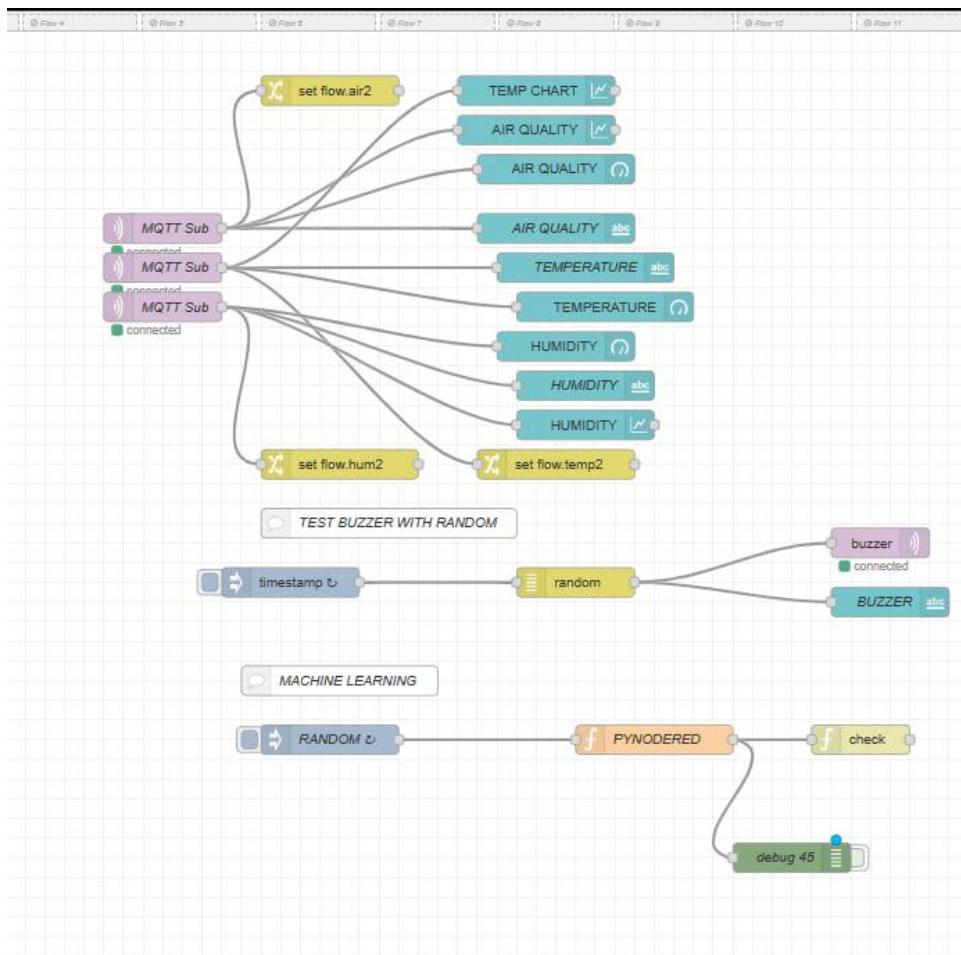

Figure 38: UI Node-red (1)

Penjelasan:

Bagian ini merupakan visualisasi Data dari sensor DHT11 dan MQ2 yang dikirim ke MQTT subscriber. Data akan divisualisasikan dengan chart agar dapat dilihat riwayatnya dan juga gauge untuk mudah diketahui value sekarang berapa.

Untuk buzzer, fungsi pynodered akan menerima data dari set flow untuk setiap sensor dan membuatnya menjadi array. Lalu fungsi pynodered check akan menerapkan machine learning untuk menentukan jika buzzer harusnya nyala atau mati. Juga ada mode random number saja untuk simulasi saja.

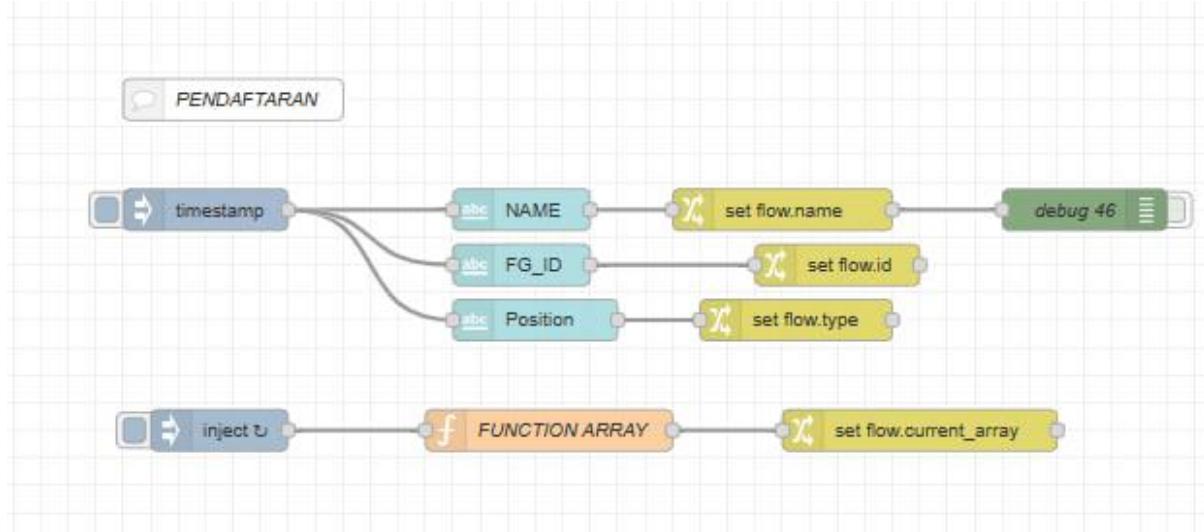

Figure 39: UI node-red (2)

Penjelasan:

Jika ingin daftar, user akan isi name, fingerprint id dan position. Semua ini akan disimpan di set flow dan akan masuk lagi ke function array untuk dibuat dalam bentuk array.

Ini adalah sistem pendaftaran Dimana seseorang

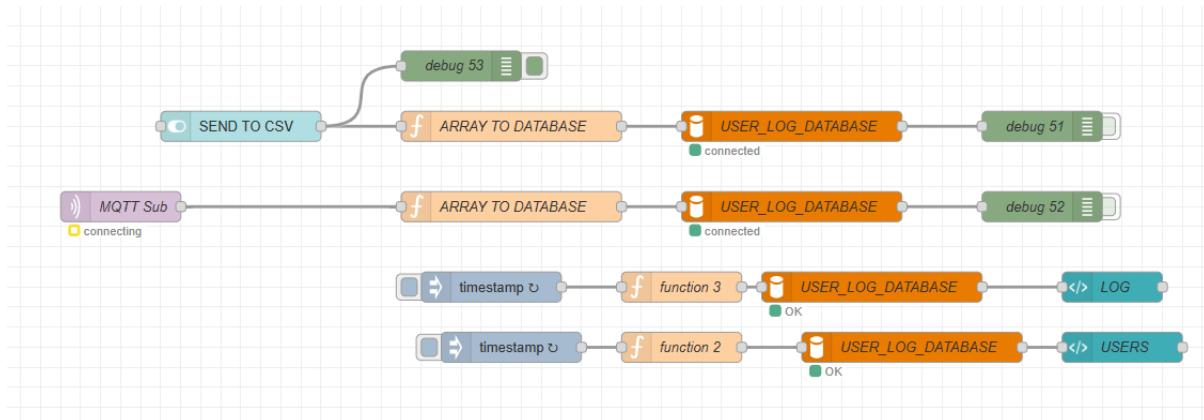

Figure 40: UI Node-red (3)

Penjelasan:

Jika ingin kirim informasi user verified ke database, bisa dipencet tombol SEND TO CSV. Ini akan kirim data ke fungsi untuk diubah menjadi array yang terus akan dikirimkan ke database. Kalau untuk database user_log, setiap kali ada message MQTT yang masuk yang berarti ada fingerprint id yang masuk, ini akan menjalankan sistem yang akan update database. Dua database ini juga akan di tampilkan dengan menggunakan template table di dua baris bawah dalam node-red.

7. CASING

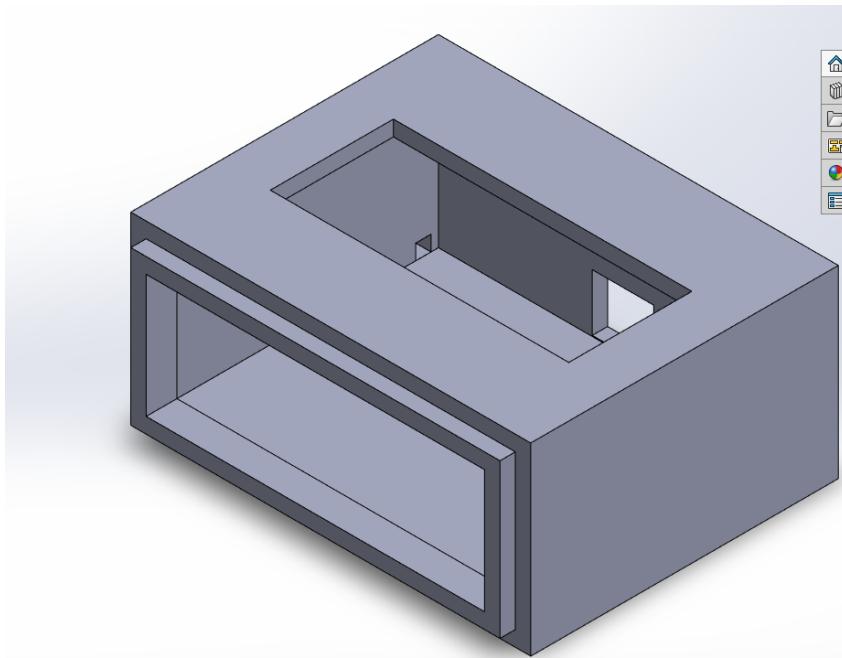

Figure 41: Isometric View Casing Verification System

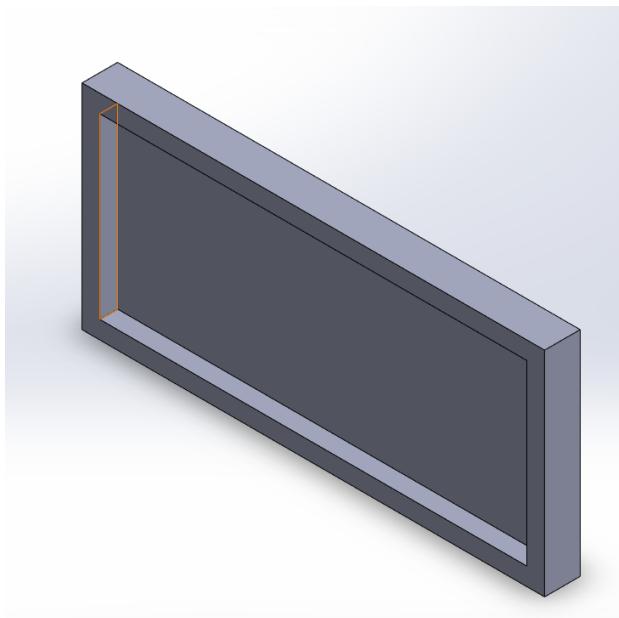

Figure 42: Isometric View Casing Lid Verification System

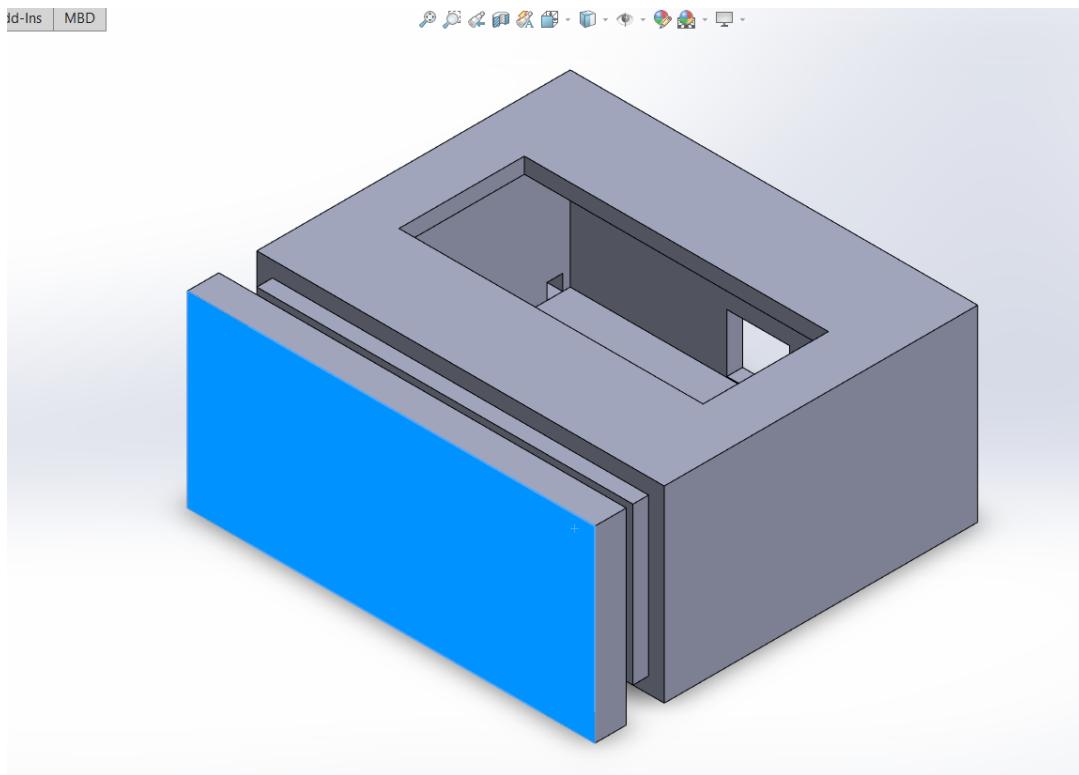

Figure 43: Isometric View Assembly Verification System

Penjelasan:

Casing ini dibuat dengan menggunakan software SolidWorks. Casing ini terdiri dari lid dan housing untuk LCD dan fingerprint sensor. Akan tetapi karena ukuran yang kurang tepat dan waktu yang tidak cukup, ukuran casing tidak terlalu pas. Casing yang masih perlu dibuat adalah Casing monitoring system juga yang akan masuk ke aspek keberlanjutan. Casing ini di print dengan menggunakan 3D printer dan filament pribadi.

9. PAMERAN

9.1 POSTER

The poster features a purple background with a central illustration of a doctor wearing a stethoscope, surrounded by clouds. The title "W.I.S.E MONITORING SYSTEM" is at the top left in large yellow letters. A pink bar contains the word "PURPOSE". Below it is a paragraph about the system's purpose and a caduceus icon. The poster is divided into seven sections with yellow headers and pink bars:

- PURPOSE**: W.I.S.E, an acronym for Wireless IoT Surgical Environment, is a system designed to aid healthcare professionals like doctors, nurses, and room cleaners in hospital operating rooms. Its goal is to facilitate efficient and secure surgical procedures for patients.
- REAL-TIME MONITORING**: W.I.S.E provides real-time monitoring of the temperature, humidity and air quality of the operating room to make sure it stays in optimal condition. It includes a small icon of a hand holding a tablet displaying charts.
- ARTIFICIAL INTELLIGENCE**: Machine Learning is used to determine whether the room is in optimal condition or not. The system can alert for necessary repairs if the conditions are not up to standard. It includes an icon of a gear with "AI" on it.
- DASHBOARD**: A dashboard is a visual interface that provides an overview of the room's status. This allows the monitoring team to quickly assess the room's condition and take necessary actions, making their job more efficient. It includes an icon of a computer screen with charts.
- TRACKING**: Sensor values in the operating room are tracked and visualized using charts. Logs of past room users are also stored in a database. This allows for historical data analysis and real-time condition checks, enhancing room management efficiency. It includes an icon of a magnifying glass over a chart.
- VERIFICATION**: User verification using a fingerprint biometric check is required to enter the operating room through a smart door lock system. It includes an icon of an eye inside a yellow ring.
- ALERT SYSTEM**: If the conditions of the room are not up to standard, an alert system will be triggered by the machine learning to alert the monitoring team to take necessary action. It includes a red speech bubble with an exclamation mark.

33 responses

Keren

sangat menarik dan bermanfaat untuk masyarakat karena mempermudah keluar masuk dalam rumah sakit

Sangat berguna dan bisa diterapkan ke berbagai hal lain.

Proyek ini sangat menarik dan inovatif

Proyek ini sangat menarik dan saya rasa akan sangat berguna untuk mempermudah akses di rumah sakit.

Saya merasa proyek ini cukup baik untuk dikembangkan lebih lanjut

Mempermudah dan mempercepat mobilitas akses di rumah sakit

Penjelasan proyek mudah untuk dipahami, cukup unik.

Sangat keren, inovatif dan menerapkan banyak konsep seperti sql, GUI, dll

10. KESIMPULAN

10.1 Kesimpulan Simulasi Node-red

Melalui simulasi Node-red ini, Sistem WISE Monitoring sistem saya dapat diuji dan disimulasikan. Bagian Registrasi Fingerprint dapat berjalan dengan baik dan data dapat dikirim ke database. Bagian random juga dapat memberikan angka pembacaan yang random dan juga fingerprint binary code yang random. Bagian verifikasi user dapat mencocokan fingerprint yang ada dengan yang di database dan dapat gerakan door lock dengan benar. Bagian room monitoring system dapat menggunakan machine learning untuk memutuskan jika buzzer mati atau nyala. Node-red dapat berjalan dengan lancar dan machine learning juga dapat diterapkan dengan baik walaupun masih 93% akurat. Database dapat ditambahkan kedepanya untuk mendapatkan akurasi yang lebih tinggi. User interface node-rednya baik sekali dan chart dapat memberikan kita Riwayat pembacaan.

10.2 Kesimpulan Pengujian Monitoring System

Berdasarkan hasil pengujian yang telah dilakukan, ada beberapa poin penting yang dapat disimpulkan. Pertama, Sistem monitoring yang telah dikembangkan dapat berjalan dengan baik. Ini menunjukkan bahwa sistem ini mampu melakukan pemantauan secara efektif dan efisien, yang tentunya sangat penting dalam konteks operasional sehari-hari. Kedua, MQTT, yang merupakan protokol messaging yang ringan dan mudah digunakan, dapat digunakan untuk publish dan subscribe message antara desktop dan NodeMCU. Ini berarti bahwa sistem ini mampu melakukan komunikasi data secara real-time antara berbagai perangkat, yang tentunya sangat penting dalam konteks Internet of Things (IoT).

Ketiga, Machine Learning yang digunakan dalam sistem ini memiliki akurasi yang cukup tinggi untuk menentukan jika buzzer harusnya mati atau nyala. Ini menunjukkan bahwa sistem ini mampu membuat keputusan berdasarkan data yang diterima, yang tentunya sangat penting dalam konteks otomatisasi dan kecerdasan buatan. Keempat, sensor yang digunakan dalam sistem ini dapat memberikan angka dengan baik. Ini berarti bahwa sistem ini mampu mengumpulkan data dari lingkungan sekitar dengan akurasi yang tinggi, yang tentunya sangat penting dalam konteks pengumpulan data dan analisis.

Dengan demikian, dapat disimpulkan bahwa sistem monitoring ini telah berhasil dikembangkan dan diuji dengan baik. Meskipun masih ada ruang untuk peningkatan dan optimasi lebih lanjut, hasil pengujian ini menunjukkan bahwa sistem ini sudah berada di jalur yang benar. Diharapkan dengan pengembangan lebih lanjut, sistem ini dapat memberikan manfaat yang lebih besar lagi bagi penggunaanya.

10.3 Kesimpulan Pengujian Verification System

Dari hasil pengujian yang telah dilakukan, kita dapat menarik beberapa kesimpulan penting. Pertama, sistem verifikasi yang telah dikembangkan dapat berjalan dengan baik. Ini berarti bahwa sistem ini mampu melakukan verifikasi dengan akurasi yang tinggi, yang tentunya sangat penting dalam konteks keamanan. Kedua, LCD yang digunakan dalam sistem ini dapat menampilkan data dengan baik. Ini berarti bahwa informasi yang disajikan kepada pengguna dapat ditampilkan dengan jelas dan mudah dibaca. Hal ini tentunya sangat penting untuk memastikan bahwa pengguna dapat memahami informasi yang disampaikan oleh sistem.

Ketiga, servo dalam sistem ini dapat bergerak untuk membuka saat terjadi fingerprint matching. Ini menunjukkan bahwa mekanisme pembukaan yang digunakan dalam sistem ini dapat berfungsi dengan baik. Hal ini tentunya sangat penting untuk memastikan bahwa akses dapat diberikan dengan cepat dan efisien saat verifikasi berhasil. Keempat, sistem registrasi juga berjalan dengan baik. Ini berarti bahwa proses pendaftaran pengguna baru dapat dilakukan dengan mudah dan cepat. Hal ini tentunya sangat penting untuk memastikan bahwa sistem ini dapat digunakan oleh sebanyak mungkin pengguna.

Kelima, MQTT broker yang digunakan dalam sistem ini dapat bekerja dengan baik untuk subscriber dan broker. Ini berarti bahwa komunikasi antara berbagai komponen dalam sistem dapat berjalan dengan lancar. Hal ini tentunya sangat penting untuk memastikan bahwa sistem dapat beroperasi dengan efisien. Dengan demikian, dapat disimpulkan bahwa sistem ini telah berhasil dikembangkan dan diuji dengan baik. Tentunya masih ada ruang untuk peningkatan dan optimasi lebih lanjut, namun hasil pengujian ini menunjukkan bahwa sistem ini sudah berada di jalur yang benar. Diharapkan dengan pengembangan lebih lanjut, sistem ini dapat memberikan manfaat yang lebih besar lagi bagi penggunanya.

10.4 Kesimpulan Evaluasi Pameran

Dari Pameran yang diadakan pada Tanggal 5/10/24, form evaluasi mendapatkan 33 respons dan dari situ ada berbagai macam kesan dan saran untuk proyek W.I.S.E ini. Kebanyakan response dari pengunjung adalah positif saat ditanya tentang kegunaan dan keunikan. Ada beberapa saran untuk menambahkan fitur sensor lain karena ruang operasi memerlukan monitoring yang lebih daripada hanya humiditas, temperature dan kualitas udara.

10.5 Aspek Keberlanjutan

Untuk kedepanya, Sistem ini dapat diintegrasikan dengan sistem manajemen rumah sakit yang ada untuk memungkinkan pemantauan dan pengelolaan yang lebih efisien dari ruangan operasi dan staf medis. Selain itu, keamanan data adalah aspek penting dalam sistem semacam ini. Maka dari itu, peningkatan pada enkripsi data dan otentikasi pengguna dapat dilakukan untuk memastikan bahwa data pasien dan informasi lainnya tetap aman. Dan meskipun sensor yang digunakan sudah cukup baik, ada kemungkinan untuk menggunakan sensor yang lebih canggih atau akurat untuk memantau kondisi ruangan.
